Very bad. The kind of game you would find on newgrounds 20 years ago.. Bullet hell!. This game has got potential. The recent influx of players to the server thanks to a semi popular streamer covering the game is good. It is great that it is a free in alpha game where there is already a thriving community and above all else the Devs are active and communicate well with the players. This game will be a success if it continues on the path it is on.

If you are coming into the game expecting it to be polished, completed and not adjusted to a end state game I do not suggest picking it up just yet cause it may leave a bad taste in your mouth. But if you come to the game knowing it is a work in progress and bring forward critical and constructive criticism as well as good ideas to how you would like the game, you can be part of the process to make a great successor to runescape grind and skill type games.. Though the game is a bit silly, it's also very addicting. 10/10 would shoot lasers as fish. I had some problems with the OST not being downloaded, so when you click on Dino Run DX in the Games Library menu, look down at the install menu (where you can find all the additional dlcs), and uncheck and recheck the box. After it's completed download, you can find it in the music menu as OST.. Great game . Pretty easy time management game, but not bad. Still not a fan of the fog of war, but it bugged me less than it did in Island Tribe 1. However, it gets a downvote from me because [the fourth bonus level doesn't work, a bug that's been known since 2011 and was supposedly fixed in 2012. Did they upload an old build to Steam or something?. I played this when it first came out years ago its still just as fun as I remembered. Its older and not as pretty or awesome as games now but sure is a lot of fun.. By a slight chance devs see this. please read!](#)

[For some reason the FPS on the coin game is extremely low and it tends to stutter no matter what. it seems my computer meets roughly all the qualities needed to run the game. however, it's still happening.](#)

[Is it a problem with the game or my computer? I cant search up videos or websites to help because there aren't any. Any reply to my review with help would be greatly appreciated!](#)

[Anyway, the game itself is great. I love the vibes I get from this game and that's why it's such a shame it's like this. Thank you for reading. -cutgrey](#)

So am seeing a lot of negative comments on the game because they can't play on 4k.

I can understand that it must be frustrating not being able to play in a resolution of your choice but that really should affect what the actual game play is like.

I only have a 1080p monitor and can say at 1080p the game runs fine and had no issues at all.

That out of the way, I am still on chapter 1 and am enjoying the game.

#### Pros

- The story is what grabbed me, and I am really enjoying the ride. Even if I have played a little so far.
- The game isn't censored, though even if it was. I don't really buy games based on the censoring, but at least we got everything there was to get.
- I enjoy the turn based combat and the style switch up is a nice change, everything in combat feels good.
- Characters are goods, about what you expect from any jrpg or anime, these days.
- I am playing with Japanese Voice acting, and can say the VA on this side is good. Will have to check out the English voice acting later.
- Plenty of boob jiggle! Must have, very important. \*Nods\*

#### Cons

- Course no game is perfect, for myself I feel the exploration, and controlling your character could be polished a little. I am not saying fluid movement, just something a little more refined. I can say it does the job.
- The game plays very much like a visual novel, and often describes things in detail. There are a few spots where I feel just a picture of what we are looking at, or some sort of visual representation would be nice when something is being described. (that's just a personal opinion thing) Example would be. Character gets a bow, but we have no idea what the bow looks like till we get into a fight. Just a small picture of a bow would have been nice.
- A few more graphical settings, now I know the game isn't really meant to be graphically outstanding, but just a few extra options for whats already existing for people with high end machines would be nice. You know nicer shadows or sharper textures that kinda deal. Not to mention 4k support, though 4k doesn't affect me directly.

I am hoping to see what else this game has to offer as my hype is still there and want to continue through more. I may change my opinion later and or update this later.. If you are a Serious fan then I dont know why you need me to tell you to get this game. If your not then obviously youve never played one before (a joke), but seriously (:p), I think this side note to the fanchise is a charming addition to a fun shooter.. fun mahjong solitaire with sexy girls as a bonus. Game generally works as advertised(aka Bomberman wannabe).....except for when it doesn't. Have had major control issues and online multi-player is erratic at best(this is when playing with one particular person, no idea if there is much of a community online or not). Bought this game months ago, would have a lot more playing time on it than 1.3 hours if it worked the way it was supposed to. Sounds like it works well for local multiplayer, if that is what you are after then I would recommend it. Looking for online multiplayer, I would probably recommend you look elsewhere. The game has a simple premise: The character you control is a clockwork postal bird, kind of like a parrot. The objective is to get from one cage to another to deliver the mail, avoiding anything spiky along the way that will kill you, and don't fly off the screen either. Your flight direction is predetermined, but you have the ability to click and drag your clockwork bird to teleport in order to avoid hazards. Pulling this off successfully is another matter. It becomes more difficult as each level progresses. Just when you think you've avoided a set of spikes, a steam jet can change your direction and now you're flying in a direction you don't really want to go. To add to that you have gates that slam together, pinwheels that spin around, and the screen is constantly moving you ever onward, and not always just left to right. Sometimes the scrolling direction changes. There's no health meter or hit points. Touch something sharp and you're dead. Fall behind and you're dead. It will test your reflexes and mouse skills, and patience as levels become increasingly difficult.

The levels themselves are fairly short so it's an easy game to play for a while, put down, and come back to. As you play you can collect gears on each level and gain a "flawless" status for completing a level without dying and collecting all 3 gears on the same pass. You can die as much as you like (there's achievements based around the number and types of deaths) or you can restart a level and try to get a flawless status. There's really no difference between dying and chosing restart from the menu except that restarting will reset your death counter so you can attempt a flawless pass. The teleportation mechanic itself is very straightforward. It's just click, drag, and release. It's extremely easy to learn. There's 60 levels. It's already challenging by level 10. Expect it to be hard to master.

Visually the theme is black and red, and I mean that - just black, and just red. Well, a little variation on the red, but mostly just

red. The environments are steampunk inspired, with spikes, lots of metal framework, spikes, gears, spikes, steam pipes, and did I mention spikes? Yeah, you'll want to avoid those. It's very minimalist and simplistic, which actually helps with the gameplay. There's no cluttered textures or anything that will visually distract you from what's important. The high contrast keeps you focused on the hazards and your bird.

The soundtrack seems to be Hungarian, or at least the title song is. It's fairly light and completely non-distracting, giving an upbeat air to what would otherwise seem like a completely hellish environment. Again, going with the theme of sharp contrasts, it fits right in.

Performance concerns should be a non-issue due to the visual simplicity, and there's no real benefit of playing this on a super-high resolution. You can play it at 1024x768 just fine. It'll play just fine on your custom gaming rig or the "old family computer".

An often overlooked concern with video games... this game is a very good choice for colorblind players. The high contrast between the open spaces and solid objects means that those who cannot see the full spectrum won't have any trouble distinguishing between the two.

Final word: If you want a simple game that's easy to learn but provides a fairly steep challenge you can't go wrong here.. Buggy play store game, not kidding when I say repeats the same level 4 times, has no variety and is boring.. Doesn't work with casual players, with a quick drive the only thing that works with a controller is the "Brake", didnt even make 5 mph before rage quitting.
