Lansing, Michigan Category:1895 establishments in Michigan Category:Gymnastics in the United States Category:1978 establishments in Michigan Sarah Bernhardt Sarah Bernhardt, (31 December 1844, Paris – 18 August 1902, Paris), French actress, one of the most celebrated women of the nineteenth century. After an early career as a successful stage actress and, later, a rich and spoiled heiress, she entered a public career as a dramatic actress at the age of 27. She achieved unprecedented success in the early 1870s with works by Dumas, Shakespeare, and Molière. With her colourful personality and an eye for publicity, she became an icon of the French stage and one of the foremost actresses of the century. Alcohol-induced changes in the rat aorta. The main effects of chronic ethanol consumption on the functional and structural properties of the rat aorta have been studied. Male Wistar rats, 8-9 weeks old, were fed an ethanol-containing liquid diet for 4 weeks and compared to pair-fed and ad libitum-fed controls. Two distinct changes were found in the arterial reactivity to acetylcholine and vasopressin, namely increased sensitivity and decreased response to vasopressin. The sensitivity to epinephrine was unchanged and the response to norepinephrine was reduced. The structural properties of the aorta were characterized by their increased content in total soluble protein, the appearance of a new protein with a molecular weight of about 68 kDa, and an increased ratio between the major soluble proteins (Mr 45-55 kDa) and a minor protein of Mr 25 kDa. The results indicate that chronic ethanol 82157476af
